

C++ Porting Guide - 2017-2018

There are several changes coming for C++ for the 2018 FRC season. The goal of this document is capture the most common items that will need to be updated / ported for resuing your 2017 code in the 2018 C++ environment. This document is NOT meant to be a complete porting guide, items will be added at the request of teams though, so if you have a question or issues with your 2017 code in the 2018 environment, please reach out to us using the contact info on the last page of this guide.

Key components that have changed

- RoboRio image – Fill this in with the Changelog once it has been published publicly.
- WPILib – Fill this in with the Changelog once it has been published publicly.
- CTRE – http://www.ctr-electronics.com/hro.html#product_tabs_technical_resources
- NavX – http://www.kauailabs.com/public_files/navx-mxp/apidocs/c++/

Before we get into some of the changes for 2018, would like to reference our MN CSA google drive and GitHub repo. We track software, library and utility used for FRC control systems and centralize that info in our GitHub and google drive. Further info located on our GitHub page: https://github.com/firstmnscsa/csa_resources and code examples are located here: <https://github.com/firstmnscsa>

Porting key items.

- CANTalon has been removed from WPILib. See this [link](#) for more info and find the [CTRE Toolsuite installer here](#).
- The Eclipse plugins have been tested with Eclipse Luna, Eclipse Mars, Eclipse Neon, and Eclipse Oxygen. Teams with existing installs from 2017 can update their installations to 2018 ensuring you have the current setup in Eclipse.
- The RobotDrive class has been split into separate classes for different drive base platform types. These classes currently include Differential Drive (common 4wd/6wd/8wd/tank/etc. platforms), Killough Drive (3 omni's) and Mecanum.
- Use of SpeedController and SpeedControllerGroup objects for RobotDrive class replacements.

Porting 2017 code to 2018 examples.

- This section will be added to as teams request help with changes and as we port more 2017 code to 2018 codebase.
- Header include changes.

2017 - `#include "CanTalonSRX.h"`

2018 - `#include "ctre/phoenix.h"`

- Namespace changes.

2017 - No need to add namespace as CANTalon was still a part of WPILib

2018 - `using namespace ctre::phoenix::motorcontrol::can;`

- Code changes – Creating base drivetrain related objects.

2017 – RobotMap.h

```
static std::shared_ptr<CANTalon> drivetrainFrontLeft;
static std::shared_ptr<CANTalon> drivetrainRearLeft;
static std::shared_ptr<CANTalon> drivetrainFrontRight;
static std::shared_ptr<CANTalon> drivetrainRearRight;
```

2018 – RobotMap.h

```
static std::shared_ptr<WPI_TalonSRX> drivetrainFrontLeft;
static std::shared_ptr<WPI_TalonSRX> drivetrainRearLeft;
static std::shared_ptr<WPI_TalonSRX> drivetrainFrontRight;
static std::shared_ptr<WPI_TalonSRX> drivetrainRearRight;
static std::shared_ptr<frc::DifferentialDrive> drivetrainDifferentialDrive;
static std::shared_ptr<frc::SpeedControllerGroup> drivetrainLeftSCG;
static std::shared_ptr<frc::SpeedControllerGroup> drivetrainRightSCG;
```

2017 – RobotMap.cpp

```
drivetrainFrontLeft.reset(new CANTalon(1));
drivetrainRearLeft.reset(new CANTalon(2));
drivetrainFrontRight.reset(new CANTalon(3));
drivetrainRearRight.reset(new CANTalon(4));
```

2018 – RobotMap.cpp – there are 9 lines below, the lines that start with > are continuations of the line above them.

```
// Create WPI_TalonSRX objects for drivetrain motors.
drivetrainFrontLeft.reset(new WPI_TalonSRX(1));
drivetrainRearLeft.reset(new WPI_TalonSRX(2));
drivetrainFrontRight.reset(new WPI_TalonSRX(3));
drivetrainRearRight.reset(new WPI_TalonSRX(4));

// Create SpeedControllerGroups for left and right side, use GetWPILib_SpeedController()
function of TalonSRX object to get appropriate SpeedController object to be added to
SpeedControllerGroup.

drivetrainLeftSCG.reset(new frc::SpeedControllerGroup(drivetrainFrontLeft->GetWPILIB_SpeedController(),drivetrainRearLeft->GetWPILIB_SpeedController()));
drivetrainRightSCG.reset(new frc::SpeedControllerGroup(drivetrainFrontRight->GetWPILIB_SpeedController(),drivetrainRearRight->GetWPILIB_SpeedController()));

drivetrainDifferentialDrive.reset(new
frc::DifferentialDrive(*drivetrainLeft.get(),*drivetrainRight.get()));
```

- Single Motor object with TalonSRX.

2017 - RobotMap.h

```
static std::shared_ptr<CANTalon> fuelShooter;
```

2018 - RobotMap.h

```
static std::shared_ptr<WPI_TalonSRX> fuelShooter;
```

2017 - RobotMap.cpp

```
fuelShooter.reset(new CANTalon(5));
```

2018 - RobotMap.cpp

// Create WPI_TalonSRX object and set it's control mode, see this in CTRE headers for more modes: [ctre/phoenix/MotorControl/ControlMode.h](#)

```
fuelShooter.reset(new WPI_TalonSRX(5));
```

```
fuelShooter.Set(ControlMode::PercentOutput, 0);
```
